

# TRUNK

## Brief

Suheib Alabed

With the significant increase in unemployment rates in Jordan, we need solutions to reduce these rates and integrate traditional methods with technology so that the general public people can deal with it. Citizens can save time and effort from the hassle of searching to find a good craftsman who does the job well. The website of "Trunk" will be a platform for craftsmen of all kinds. The Goal of the project is hiring the largest number of people and reducing unemployment rates in Jordan, while at the same time reducing the time and effort of citizens to reach the best craftsmen in an easy way. There is a Rate service on the site, which allows the user to Rate the craftsmen after doing his work, and this feature is very important to filter the best craftsmen and facilitate the search process for the user. From services that will be available on the site is the sale of building materials and everything that any craftsman needs and this matter will help the craftsmen to provide all the materials at any time and help the owners of building materials stores to market for themselves.
